

FOOT THERAPY

Beech Sandals Stretch, Flex, Align and Rejuvenate

The Perfect Pedicure Accessory!

Beech sandals are the latest development in summer footwear and are set to become the newest craze in a market where consumers are looking for both **function and design!**

Originally invented by Dr Gayle Trenberth as the perfect post pedicure solution, the Beech craze swept the States when working women realized that they no longer had to wait in the salon while their newly painted toes dried!

Instead, they could slip on their Beech before the pedicure, let the toe separators space their toes out, then walk straight out without a smudge worry in mind!

In a culture where the working lunch has become the norm, Beech offer women a new reason to get up and take a break for some lunch time pampering!

The benefits of Beech don't stop there - they have added health benefits too. By using the basic yoga principle of separating the toes, Beech work to straighten the bones in the feet, improving balance, encouraging body alignment and stretching leg muscles. Approved by many health professionals, Beech simulate the agile movements of youthful feet, and help to combat many unwanted lumps and bumps!

Each of our feet contains 26 bones, a massive **25% of the bones in our body**, so it is worth taking care of them! Keep them looking beautiful by giving them a bit of tender loving care, choose a bright nail polish and slip into a funky pair of Beech sandals, let your feet breathe a sigh of relief!

With great summer styling and a **fresh, bold colour palette** Beech are set apart in the style stakes and are the perfect compliment to any summer outfit looking to make a statement

Beech footwear is available exclusively from www.lovethoseshoes.com / 0161 975 5380
